THE RMF SOLUTION

The solution for Koller was an RMF Systems By-pass unit (BPU1A30HB000) and the ACM61R and KL96R Air Conditioners to be integrated in the Wire Line Combi unit. This secures a long operational life and reliable performance.

THE WIRELINE UNITS

KOLLER Wireline units have been designed for measurement and workover activities with wire capacities of more than 8,000m / 26,250 ft. Both Slickline and E-Line jobs can be performed. Flexibility, high speed and high pull force at any depth characterize our Wireline Winches.

FLEXIBLE DESIGN

Koller's designs are developed by close association with their customers. Wire line units can be placed on trucks from various manufacturers. The layout of the workshop and operator area is free configurable by the customer.
